

LUMINETTE LONG LIFE

Guaranteed up to 45,000 Hours

The Aura Luminette LL is a T8 26mm diameter Long Life triphosphor fluorescent lamp with three times longer service life compared to standard triphosphor lamp. It has a high colour rendering of Ra 85.

Luminette LL produces 10% to 12% more light than standard colour fluorescent lamps. In addition it has a better lumen maintenance throughout its service life.

Luminette LL uses two special patents. One for the unique cathode construction and another for the inside protection layer.

The design, together with strict quality controls during a high precision manufacturing process, provides a unique fluorescent lamp.

Operation is possible in standard luminaries by conventional or low loss ballast and starter or electronic HF ballast.

Long Life Lights

The Long Life Lights concept comprises light sources with extra long service life. The concept is the result of innovative product development and rigorous quality control. For our customers, the unique service life means that light sources do not need to be changed so often, which reduces their maintenance costs. The products in the concept are therefore an investment for our customers and for the environment. Products such as fluorescent tubes and light bulbs are developed, manufactured and sold within the framework of the Long Life Lights concept.

Applications

Luminette LL is recommended for use in environments where high quality light is of major importance. Most profitable is the use in areas where the lamp replacement may be difficult and cost intensive.

Luminette LL is well suited for offices, shops, industrial production areas, warehouses, sports facilities, hospitals, hotels and restaurants.
