

NEODYMLITE

Bring true colours to life with our colour corrected lamps

From **GREENSTOCK NEODYMLITE** lamps. Representing a new generation of lighting with its special neodym glass bulb, it will create a pure white light that will enhance the colours and highlight the different contrasts.

NEODYMLITE lamps are colour balanced incandescent lamps that enhance true colours, provide better contrast and offer visual comfort at its best. The human eye is sensitive in the yellow and green areas of the spectrum, and less in the blue and red.

NEODYMLITE lamps balance the situation by putting the red and blue in the right place.

What makes this product so exceptional is the special bulb glass material containing neodymium oxide - which acts as a filter reducing the yellow and partly green light in the spectrum. The result: enhanced colours and improved colour contrast.

The **NEODYMLITE** series consists of incandescent, halogen, blended and mercury vapour lamps. Incandescent lamps include different sizes of reflector, crown silver, standard, candle, dichroic and round bulb lamps.
